

Project Design Phase-II

Data Flow Diagram & User Stories

Date	30/06/2026
Roll Number	23A51A4272
Project Name	Library Book Request Management in System
Maximum Marks	4 Marks

Data Flow Diagrams:

A **Data Flow Diagram (DFD)** is a graphical representation of how information moves through the **Library Book Request Management System**. It illustrates how data is entered by students, processed within the ServiceNow platform, validated using Business Rules, stored in the custom table, and communicated to the librarian through email notifications. The DFD clearly shows the flow of information between users, the system, and the database, providing a better understanding of the application's workflow.

User Stories :

USL-1: As a student, I can submit a library book request through the Library Book Request form.

USL-2: As a student, I can provide all the required book request details before submitting the request.

USL-3: As a student, I can enter the book name, author name, issue date, and return date while requesting a book.

USL-4: As a student, I can receive a unique request number automatically after submitting my request.

USL-5: As a student, I can track the status of my library book request.

USL-6: As a librarian, I can receive an email notification whenever a new library book request is submitted.

USL-7: As a librarian, I can view all submitted library book requests.

USL-8: As a librarian, I can approve, reject, issue, or update the status of a book request.

USL-9: As a librarian, I can manage and maintain library book request records efficiently.

USL-10: As an administrator, I can create and manage the **Library Book Request** custom table.

USL-11: As an administrator, I can configure the request form with all required fields.

USL-12: As an administrator, I can implement a Business Rule to validate that the Issue Date is not in the past.

USL-13: As an administrator, I can configure Number Maintenance to automatically generate a unique Request Number.

USL-14: As an administrator, I can configure Flow Designer to automatically send email notifications to the librarian.

USL-15: As an administrator, I can monitor and manage all library book requests for reporting and maintenance.
