Roll Number	23A51A4272
Project Name	Library Book Request Management System in ServiceNow
Maximum Marks	4 marks

Brainstorm & Idea Prioritization Template:

The **Library Book Request Management System in ServiceNow** was developed to simplify and automate the process of requesting library books. During the brainstorming phase, different ideas were discussed to identify the best solution for improving the existing manual process. The team focused on reducing paperwork, improving request tracking, automating notifications, and enhancing the overall user experience. Various ServiceNow features were evaluated, and the most effective ideas were selected based on feasibility, ease of implementation, and the value they provide to students and librarians.

Brainstormed Ideas

Idea ID	Idea	Priority	Reason
BI-1	Create a Service Catalog for Library Book Requests	High	Provides an easy self-service portal for students.
BI-2	Create a Custom Table to store library request records	High	Maintains all request details in a centralized database.
BI-3	Configure Number Maintenance for automatic Request Number generation	High	Ensures every request has a unique identification number.
BI-4	Add Business Rules to validate the Issue Date	High	Prevents invalid or past issue dates.
BI-5	Use Flow Designer to send email notifications to librarians	High	Automates communication and reduces manual effort.
BI-6	Enable Request Status tracking	Medium	Allows librarians to manage request progress efficiently.
BI-7	Create reports for library request analysis	Medium	Helps monitor request trends and performance.
BI-8	Add dashboard for library request statistics	Low	Useful for future enhancements and reporting.
