Customer Problem Statement Template

The **Library Book Request Management in ServiceNow** project focuses on simplifying and automating the process of requesting library books. By leveraging **ServiceNow's Custom Tables, Business Rules, Number Maintenance, Flow Designer, and Email Notification** capabilities, the solution eliminates manual paperwork and ensures that library book requests are processed efficiently. Students can easily submit book requests through the **Library Book Request** form, while the system automatically validates the issue date, generates a unique request number, stores the request details, and notifies the librarian through email. This automation reduces manual effort, improves request tracking, enhances communication between students and librarians, and provides a transparent and efficient library book request management process. The solution also ensures accurate record management and can be extended with additional library automation features in the future.

Aspect	Description in context of our project	
 I am		We are ServiceNow developers and library automation enthusiasts working on building an automated library book request management solution.
 I'm trying to		Build a simple and efficient way for students to submit book requests and automate the validation, tracking, notifications and management process.
 But		Currently, the process is manual, time-consuming and prone to errors, leading to delays and lack of visibility for students and librarians.
 because		Requests are handled through paper forms, emails and spreadsheets with no validation, no unique request number, no automatic notifications and poor tracking.
 which makes me feel		Frustrated and unsure about the status of my request, with delays in getting books issued and no clear communication.
 which makes our solution valuable		By providing an automated, validated and transparent book request process with real-time status tracking and email notifications, ensuring a better experience for students and efficient management for librarians.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a student who wants to borrow a library book.	Submit a library book request quickly and receive the book on time.	The request process is manual and takes too much time.	There is no automated system to validate requests, generate request numbers, or notify the librarian.	Frustrated due to delays and lack of request tracking.
PS-2	I am a librarian responsible for managing book requests.	Process and track student book requests efficiently.	Managing requests manually is time-consuming and error-prone.	Requests are maintained using manual records without automation or real-time notifications.	Overwhelmed because it is difficult to manage and monitor multiple requests efficiently.
