

Ideation Phase

Empathize & Discover

Date	30 June 2026
Project Name	Library Book Request Management in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

An **Empathy Map** is a simple and easy-to-understand visual tool that captures the needs, thoughts, behaviours, and experiences of users involved in the **Library Book Request Management** process.

It helps the project team better understand the expectations and challenges faced by students and librarians while requesting and managing library books. Developing an effective solution requires understanding the actual problems experienced by users, such as delays in processing requests, lack of request tracking, and manual record management.

Creating an empathy map enables the development team to view the system from the users' perspective, identify their goals and pain points, and design a user-friendly and efficient library book request management solution using the **ServiceNow** platform.

Uses of an Empathy Map

- Understands the needs and expectations of students and librarians.
- Helps view the library request process from the user's perspective.
- Identifies challenges faced during book request submission and processing.
- Improves communication between students and library staff.
- Supports the design of a simple, efficient, and user-centered library management solution.
- Helps develop a system that improves request tracking, automation, and overall user satisfaction.

EMPATHY MAP

SAYS

1. "I need the requested book as soon as possible."
2. "I want an easy way to submit my book request."
3. "I wish I could track the status of my request online."
4. "I hope the librarian receives my request immediately."
5. "I am satisfied when my book request is processed quickly."

FEELS

1. Frustrated when book requests are processed slowly.
2. Confused when there are no updates about the request status.
3. Worried if the requested book is unavailable.
4. Happy when the request is approved and the book is issued quickly.
5. Satisfied when the librarian receives the request and sends timely updates.

THINKS

1. "Will my book request be approved soon?"
2. "Is the requested book available in the library?"
3. "Can I track the status of my book request online?"
4. "I hope my request reaches the librarian without any delay."
5. "The system should make requesting library books simple and fast."

DOES

1. Fills out the **Library Book Request** form with the required details.
2. Submits the request through the **ServiceNow** application.
3. Waits for the librarian to review and process the request.
4. Checks the request status to know whether it has been approved or issued.
5. Receives email notifications and collects the book after the request is approved.

PAINS

- Manual submission of library book requests.
- Delays in processing and issuing requested books.
- No real-time tracking of book request status.
- Difficulty in knowing whether the requested book is available.
- Lack of timely communication between students and the librarian.
- Possibility of duplicate or missing request records.
- Human errors during request processing and record management.

GAINS

- Easy online submission of library book requests.
- Automatic generation of a unique request number for each request.
- Faster processing of book requests through workflow automation.
- Real-time tracking of library book request status.
- Automatic email notifications to the librarian after a request is submitted.
- Reduced paperwork and manual effort in managing library requests.
- Improved communication between students and librarians.
- Better accuracy, transparency, and efficient management of library book requests.
